

**HPQ SILICON WELL-FUNDED TO ACCELERATE LEADING NANO SILICON INITIATIVES  
FOR BATTERIES AND OTHER RENEWABLE ENERGY APPLICATIONS FOR 2020 AND BEYOND**

**Montreal, Quebec, Canada, (August 12, 2020):** [HPQ Silicon Resources Inc.](#) (“HPQ” or the “Company”) [TSX-V: HPQ](#); [FWB: UGE](#); [Other OTC : URAGE](#); is pleased to announced that since the start of June 2020, the Company has raised over \$1,452,401 through the exercise of various financial instruments.

During the period ended June 30, 2020, \$182,277 was raised, at an average price of \$0.122 per share, through the exercise of 1,087,000 warrants, 178,000 broker warrants and 175,000 broker units. Furthermore, since the start of Q3 another \$1,270,124 was raised, at an average price of \$0.121 per share, through the exercise of 7,959,588 warrants, 81,430 brokers warrant and 2,400,000 options.

During the same period the 11,881,738 financial instruments were exercise, HPQ traded 156,507,300 shares for a value of \$55,789,137 at an average price of \$0.356. While the volume generated represented 60% of HPQ outstanding shares, the shares issued on exercise represented only 7.6% of the trading volume.

Presently HPQ cash on hand, liquid investment in public companies, and cash reserved for the *PUREVAP™* QRR pilot plant project, total \$4,725,221. In addition, the \$11,482,557 cash value of outstanding in the money warrants and options, (80% of those are owned by PyroGenesis, Investissement Québec (IQ), insiders and strategic investors), provides HPQ access to over \$16M. This is enough sources of funds to develop, to commercial scale, the game changing *PUREVAP™* family of processes HPQ is developing with Pyrogenesis namely:

- *The PUREVAP™ “Quartz Reduction Reactors” (QRR), an innovative process (patent pending), which will permit the one step transformation of quartz (SiO<sub>2</sub>) into high purity silicon (Si) at reduced costs, energy input, and carbon footprint that will propagate its considerable renewable energy potential; and*
- *The PUREVAP™ Nano Silicon Reactor (NSiR), a new proprietary process that use PUREVAP™ QRR silicon (Si) as feedstock, to make spherical silicon nanopowders and nanowires.”*

*“Since the start of the year, HPQ has made great strides toward its goal of becoming a leader in the field of Nano silicon materials production, and we very grateful for the market support we have received over the last few months and the resultant financings.” said Bernard Tourillon, President & CEO of HPQ Silicon. “Our PUREVAP™ processes open up unique multibillion-dollar business opportunity for HPQ and PyroGenesis, as we strive to deliver the critical and economically viable Silicon nano- materials required by the surging Li-ion battery market and other large renewable energy markets.”*

**POTENTIAL OF OUR *PUREVAP™* NANO SILICON (Si) REACTOR GETTING NOTICED**

The *PUREVAP™* NSiR process is purposely being developed to address the fact that current manufacturing processes to make Nano Silicon (Si) Powders are not very scalable and simply too expensive to be commercially feasible, requiring up to US\$ 30,000/kg<sup>1</sup> selling prices to justify production. HPQ and partner Pyrogenesis are working to develop commercially scalable Nano Silicon powder production and have caught the attention of significant industry players. The company continues to evaluate and discuss potential opportunities under Confidentiality Agreements and cannot provide further commentary at this time.

## About Silicon

Silicon (Si), also known as silicon metal, is one of today's strategic materials needed to fulfil the Renewable Energy Revolution ("RER") presently under way. Silicon does not exist in its pure state; it must be extracted from quartz (SiO<sub>2</sub>), in what has historically been a capital and energy intensive process.

## About HPQ Silicon

[HPQ Silicon Resources Inc. \(TSX-V: HPQ\)](#) is a Canadian producer of Innovative Silicon Solutions, based in Montreal, building a portfolio of unique high value specialty silicon products needed for the coming RER.

Working with [PyroGenesis Canada Inc. \(TSX-V: PYR\)](#), a high-tech company that designs, develops, manufactures and commercializes plasma - based processes, HPQ is developing:

- The **PUREVAP™ "Quartz Reduction Reactors" (QRR)**, an innovative process (patent pending), which will permit the one step transformation of quartz (SiO<sub>2</sub>) into high purity silicon (Si) at reduced costs, energy input, and carbon footprint that will propagate its considerable renewable energy potential;
  - > HPQ believes it will become the lowest cost (Capex and Opex) producer of silicon (Si) and high purity silicon metal (3N – 4N Si);
- The **PUREVAP™ Nano Silicon Reactor (NSiR)**, a new proprietary process that can use different purities of silicon (Si) as feedstock, to make spherical silicon nanopowders and nanowires;
  - > HPQ believes it can also become the lowest cost manufacturer of spherical Si nanopowders and silicon-based composites needed by manufacturers of next-generation lithium-ion batteries;
  - > During the coming months, spherical Si nanopowders and nanowires silicon-based composite samples requested by industry participants and research institutions' will be produced using **PUREVAP™ SiNR**.

HPQ is also working with industry leader [Apollon Solar](#) of France to:

- Use their patented process and develop a capability to produce commercially porous silicon (Si) wafers and porous silicon (Si) powders;
  - > The collaboration will allow HPQ to become the lowest cost producer of porous silicon wafers for all-solid -state batteries and porous silicon powders for Li-ion batteries.
  - > The plan is to deliver porous Si wafer to a battery manufacturer (under NDA) for testing in 2020.
